

COMMUNITY POLICY

Constructability WA acknowledges that the Company has a responsibility to those communities in which our operations may impact. It is through working closely with these communities that we will ensure the sustainable growth of our business while minimising any adverse effects to the local community.

In order to achieve our objectives we will:

- Enable the public and local communities to have an involvement in the planning of the activities which are to take place.
- Provide members of the community with information relating to the activities.
- Encourage feedback and implement changes and initiatives which are suggested as a result of the feedback received.
- Manage the activities which are conducted in order to minimise the impact on the community.
- Acknowledge the different cultures that exist within the community and realise that different individuals may have different requirements, all of which must be respected.
- Provide sufficient internal resources and education to ensure that the Company and its representatives are aware of their responsibilities relating to the community.
- Regularly review our Community Policy in order that it may continually improve and remain relevant in the current times.

Constructability WA respects the communities in which we operate and recognises that in the current climate, a community orientated philosophy is an essential component of any successful business.
